Attorney Dricket No. 114596-07-4014 Amendment Dated April 27, 2006

AMENDMENT TO THE ABSTRACT

Markup form

Profiling Methods and apparatus for profiling the execution of a computer program. The program is executed on a computer, without the program having been compiled for profiled execution. The program is coded in a mode-dependent an instruction set in which an interpretation of an instruction depends on a processor mode not expressed in the binary representation of the instruction. The computer includes instruction pipeline circuitry configured to execute instructions of the computer, and profile circuitry configured to detect and record, without campiler assistance for execution profiling, profile information desembing a sequence of events occurring in the instruction pipeline. During a profile-quickment execution interval of execution of the program that induces events that mutch time independent selection criteria of profileable events to be profiled, the profile encentry records no profile information in response to the mentronee of profileable events. After a triggering event is detected, the profile circuitry commences a profiled execution interval, and records profile information describing every profileable event during that a profiled execution interval that matches the time-independent profileable event selection criterin induced during the profiled execution interval. The profiled information includes at least all events of the two classes (i) a divergence of execution from sequential execution[[,]] and (ii) a processor mode changes that in not inferable from instruction the opcode of the instruction that induces the processor mode change taken together with a processes much before the mode change instruction the recording continuing until a predetermined stop condition is rembed. The recorded profile information is efficiently tailored to annotate the profiled binary code with sufficient processor mode information to resolve modedependency in the binary-coding, and indicates contiguous ranges of sequential instructions executed during a profiled interval by low and high houndaries of the contiguous ranges. indicating the high boundary by the address of the last byte of the range. The profile information further identifies each distinct physical page of instruction text executed during the execution interval.

FROM WILLKIE FARR 37 FAX DEPT. Attorney Docket No. 114596 07 4014 Amendment Dated April 77, 2006

REMARKS/ARCUMENTS

This paper responds to a telephone request for an amended abstract. The amendment does not relate to any statutory requirement

The Examiner requested a replacement abstract of 150 words or less, even though the rules at the filing date permitted a longer abstract, and the new abstract rule, 37 C.F.R. § 1.72(b), does not meet requirements for retroactive effect. Bowen v. Georgetown University Hospital. 488 U.S. 204, 208 (1988) ("Retroactivity is not favored in the law. Thus, ... administrative rules will not be construed to have retroactive effect unless their language requires this result. ... [An agency's] rulemaking authority will not ... he understood to encompass the power to promulgate retroactive rules unless that power is conveyed by Congress in express terms.")

Nonetheless, the amended abstract is provided solely as an accommodation to current formal requirements for word count, subject to the understanding that the abstract is not to be used to interpret the claims of this application or any other, and is not to be construed as a surrender of subject matter, in the Office or elsewhere.

In view of the amendments and remarks, Applicant requests that the application be passed to issue in due course. The Examiner is urged to telephone Applicant's undersigned counsel at the number noted below if it will advance the prosecution of this application, or with any suggestion to resolve any condition that would impede allowance. Kindly charge any additional fee, or credit any surplus, to Deposit Account No. 23-2405, Order No. 114596-07-4014.

Respectfully submitted,

WILLKIE FARK & GALLAGHER LLP
